

# UK Wiring Unit

## Overview

Electrical wiring in the United Kingdom refers to the practices and standards utilised in constructing electrical installations within domestic, commercial, industrial, and other structures and locations (such as marinas or caravan parks ), within the region of the United Kingdom. This does not include the topics of electrical power transmission and distribution. Installations are distinguished by common terminology BS 7671 "Requirements for Electrical Installations. IET Wiring Regulations" (the regs, or wiring regs) These are detailed rules for the design, installation and sign-off for end-user electrical installations. Compliance. The standard wiring colours in the UK are (as of 2006 ) the same as elsewhere in Europe and follow international standard. This colour scheme had already been introduced for appliance flexes in the th.

What Are The Different Types of Consumer Unit?  
What Are Rcd's? What Are Mcb's?  
How Is A Consumer Unit Wired Up?  
The modern consumer unit is the centre, or heart, of the wiring system in the home. The unit distributes the electricity, via newer RCD's and MCB's that replace the older fuses, to all of the different circuits used in your home such as the sockets, lights, cooker and any others. Traditionally, electricity was distributed around a property by using... See more on [diydoctor .uk](#) Arlec UK
