

Upgraded version of modular energy storage cabinet for use in supercomputing centers

Overview

B-Nest™ is a modular, multi-story structure designed to house battery energy storage systems (BESS) for unparalleled energy density. In this technical post, we delve into its core components, highlighting the user-friendly design, robust safety mechanisms, and advanced monitoring capabilities. Compliant with the most stringent international fire codes and safety regulations, the B-Nest™ is a bankable and fully insurable solution that can be deployed. Ities, and high cycle life. Today, customers in many industries rely on SECH ultracapacitor cells, ESS modules and cabinet-based systems for frequency regulation, voltage stabilization, peak shaving, black start capability, improved reliability of microgrids, power quality measurement and UPS. Socomec says its new modular energy storage system includes a converter and up to six battery cabinets. At maximum capacity, it can store 1,116 kWh.
