

Uruguay Avionics ONT Optical Network Terminal 1G

Overview

The SNR-ONT-1G is comprised of one GPON uplink and Gigabit Ethernet downlink supporting 10/100/1000Base-T (RJ45). It helps service providers to extend their core optical network all the way to their subscribers, eliminating bandwidth bottlenecks in the last mile. GPON technology supports upstream 1. Our next generation of multigigabit XGS-PON optical network terminals (ONTs) is here and ready to support the most. Our integrated circuits and reference designs help you create optical network terminal (ONT) units that enable high-speed data connections for today's passive optical networks. Use the resources below to design a system with our most advanced microcontroller, interface and power delivery. Discover our selection of GPON, EPON, and XG (S)PON ONT/ONU devices. An optical network terminal (ONT) is a device that serves as the endpoint of an optical network, connecting users to the network. It's typically used in fibre-to-the-premises (FTTP) or fibre-to-the-home (FTTH) networks to deliver ultrafast connectivity to your business or home.
