

View the switch s access IP

Overview

Once the Command Prompt or Terminal window is open, type the following command: `arp -a` (Windows) or `arp -a | grep -i switch` (macOS). This command will display a list of devices on your network along with their IP and MAC addresses. Look for the entry that corresponds to your switch. On Windows, you can do this by pressing the Windows key + R, typing. This guide provides multiple, easy-to-follow methods for discovering the IP address of your network switch, ensuring smooth network management and troubleshooting. As far as I know it is not really the case. Ip device tracking can work on L2. Is there a way I can find the list of IP addresses connected to a switch (may be Unix command), so that I can visit each desk, run a command, and check all the active IP addresses (computers) connected to that switch, and based on that I can find out to which switch that specific IP address is. Cisco switches are fundamental components of modern network infrastructure, facilitating efficient data transmission within Local Area Networks (LANs) and beyond.
