

Wall treatment for distribution boxes

Overview

Physical brushing uses grinding equipment to create uniform brush patterns on the metal surface. Chemical passivation uses a passivation solution with a specific formula to induce a chemical reaction in the stainless steel. To improve the environmental adaptability of 316 stainless steel enclosure stainless steel, surface coating treatment of 4x4 stainless steel junction box has gradually become one of the common processes. As a power distribution equipment manufacturer, we have continuously observed and practiced. CommScope offers a complete line of easy-to-use access terminals, copper and fiber splice closures, patch closures and accessories to speed deployment. Our powder-coated steel distribution box is designed to offer a rugged, reliable, and affordable solution for indoor electrical distribution systems. This includes the rear wall, side panels, doors, door handle and ventilation grille with climate filter for the air intake.
