

What are the construction procedures for optical cable lines

Overview

The construction procedures of general optical cable lines are mainly divided into five stages: preparation, laying, connection, testing and completion acceptance. The Fiber Optic Association, Inc. (FOA) was founded in 1995 to help develop the workforce to build the fiber optic networks to support a rapid expansion in communications and the Internet. This. Where reels are supplied with protective material fitted over the cable, the protection should remain in place until the cable will be installed. During installation, all curvatures should be smooth. ①Optical cable single-disc inspection: check the appearance of the optical. With 20 years of experience in professional optical cable manufacturing, we have a set of mature methods and experience for optical cable construction. Sections are included for project management; cable handling, testing and equipment; overhead cable placement; underground cable placement; underground enclosures; bonding and grounding; cable.
