

What does WBS represent in the busbar numbering

Overview

A WBS number is an outline-style number with multiple segments, for example, 5. Each time you indent a task underneath another one, you will add a new segment to the WBS. Tasks within the WBS are sorted by segment, similar to how semantic versioning numbers are sorted. Project managers use the WBS during project execution to track the status of deliverables and work packages. The purpose of a WBS is to help the project manager. An important design principle for work breakdown structures is called the 100% rule. It has been defined as follows: The 100% rule states that the WBS includes 100% of the work defined by the project scope and captures all deliverables – internal, external, interim – in terms of the work to be completed, including project management. The 100% rule is one of the most important principles guiding the development, decomp
