Distribution boxes contain many protective devices like circuit breakers, fuses, and isolator switches to distribute and regulate power from the main power supply to multiple circuits in other buildings, and to prevent damage and fire hazards, usually installed in electrical. A distribution box is the heart of any electrical system. It takes the incoming power and safely distributes it to different circuits throughout your building. The distribution system typically starts from the substation, where electricity is stepped down from high voltage to lower voltage for use. An electrical distribution box, also known as a power distribution box, panelboard, or consumer unit, is the core of an electrical system. We also highlight how reliable manufacturers like NUOMAK support stable, compliant, and cost-effective power distribution.
