

What fiber optic cables are used for surveillance cameras

Overview

The most common options are Cat5, Cat5e, Cat6, Cat6a, and fiber optic cables. Each has distinct characteristics, making them suitable for different applications. This blog post compares these cabling options to help you decide which is best for your security camera system. Cat5: An older Ethernet. Surveillance camera cable types include coaxial, Siamese, Ethernet (Cat5e/Cat6), fiber optic, and plug-and-play options. Each serves specific camera systems based on power, video transmission, distance, and interference requirements. When installing a security camera system, choosing the right. IP cameras that are part of a modern surveillance system are deployed using PoE technology that involves the use of copper based network cabling like CAT5e or CAT6 that has a data transmission limit of 100m (328ft). While that is adequate for installations for a home or small business, large scale. Cat5e and Cat6 are commonly used UTP cables. Most installers are familiar with and are using Cat5E/6.
