

What is a galvanized ladder-type cable tray

Overview

Hot Dip Galvanized (GI) Ladder Cable Trays are metal trays with a ladder-like design, coated with a layer of zinc through the hot-dip galvanizing process. The ladder design features rungs that support and secure cables, allowing for easy installation, maintenance, and ventilation. GI ladder type cable tray, also known as galvanized cable ladder, is a specialized solution designed and engineered to carry wiring installations, both internally and externally, particularly in vertical shafts found in heavy industry plants, power plants, petrochemical facilities, high-rise. There are several types of cable trays, including ladder, perforated, solid bottom, basket, and channel trays. Each cable tray type performs a different function and comes in various materials such as aluminum, galvanized steel, and FRP. Ideal for high vibration environments. These trays consist of two parallel side rails connected by rungs at regular intervals, resembling a ladder.
