

What is the purpose of an lc interface cable

Overview

An LC (Lucent Connector) is a small-form-factor fiber optic connector that uses a 1.25 mm ceramic ferrule and a secure push-pull latch mechanism. It supports both single-mode and multimode fibers and is especially common in duplex configurations for full-duplex communication (transmit/receive). It was developed by Lucent Technologies (now part of Nokia via Alcatel-Lucent) in the 1990s. The LC connector is about half the size of an SC connector. It uses a push-pull. This guide provides a fully updated and industry-ready overview of LC fiber optics, explaining the origin and design of LC connectors, their key features, and the complete ecosystem of LC-based products used in modern networking. You may find LC connector has a strong family which includes but not limited to LC optical fiber connectors, LC fiber patch cables, LC fiber. Among all connector types that drive today's high-speed networks, the LC connector has emerged as the most widely adopted small form factor (SFF) interface.
