

# What panel should I use for one network cable and one fiber optic cable

## Overview

A fiber patch panel is a mounted enclosure—either rack-mounted or wall-mounted—used to terminate, manage, and interconnect multiple fiber optic cables. It acts as a hub for organizing splices and patch cords, streamlining fiber management and preserving signal integrity. Once you understand the basic concepts, you can check out my Recommended Equipment section toward the bottom of the. It can provide significantly higher bandwidth and carry more data than traditional copper cables, which allows for faster data transmission and supports high-speed networking applications in telecommunications, data centers, financial institutions, and government departments. Cable Organization:. With the growth of the fiber industry, a wide array of fiber optic patch panels have been developed to fit the many needs of these varying environments.
