

What wire is wound around the fiber distributor s pigtail coil

Overview

The sub-cables are wound around a central strength member, which also acts as a bend radius limiter. The big advantage of the breakout cable is that it can be brought to a termination point, have the jacket stripped off and individual sub-cables terminated directly. Definition: some length of optical fiber wound up to a coil
Alternative terms: fiber optic coils, optical fiber coils, fiber spools

A fiber pigtail is typically a fiber optic cable with one end factory pre-terminated fiber connector and the other exposed fiber. It is usually suitable for field termination using a mechanical or fusion splicer.
