

# Why are fiber optic cables used between switches

## Overview

Fiber optic cables are used when both high bandwidth and distance are key factors in connecting high-speed switches in data centers and other networks, and are used by telecommunications carriers in Fiber to the Home (FTTH), Fiber to the Premises (FTTP) and other long-haul. Fiber optic cables are used when both high bandwidth and distance are key factors in connecting high-speed switches in data centers and other networks, and are used by telecommunications carriers in Fiber to the Home (FTTH), Fiber to the Premises (FTTP) and other long-haul. If you have multiple Ethernet switches that need to be connected over long distances, fiber is obviously a preferred choice. Moreover, when it comes to bandwidth, no currently available technology is better than single-mode fiber. It can provide significantly higher bandwidth and carry more data. Traditionally, network switches have been connected using copper cables, but with the increasing demand for high-speed and reliable connectivity, fiber optic cables have gained prominence. Unlike traditional copper-based switches, optical fiber switches offer higher. Compares fiber optic cables with traditional copper Ethernet cables, focusing on the advantages fiber brings in high-speed, long-distance, and high-density environments.
